

Django Learning Roadmap (Basic to Advanced)

Day 1: Django Setup & First App

- Install Django and create a project
- Understand Django folder structure
- Create and run a simple view with URL mapping

Day 2: Views, URLs, Templates

- Function-Based Views (FBVs)
- Template rendering and inheritance
- URL dispatcher and route naming

Day 3: Models and Admin

- Define Django models with fields
- Make and apply migrations
- Register models in the admin panel

Day 4: Forms and CRUD

- Create forms using forms.Form and ModelForm
- Handle POST/GET data
- Implement create, update, and delete views

Day 5: Authentication

- Use built-in User model
- Login, logout, register functionality
- Use @login_required decorator

Day 6: ORM Deep Dive

- Complex queries using filter, Q, F
- Model relationships: ForeignKey, ManyToMany
- Custom managers and querysets

Django Learning Roadmap (Basic to Advanced)

Day 7: Class-Based Views (CBVs)

- ListView, DetailView, CreateView, etc.
- Overriding CBV methods
- Using Mixins

Day 8: Deployment

- Set up production settings
- Collect static files
- Deploy to PythonAnywhere/Heroku/Render

Day 9: Advanced Features

- Pagination and search
- Django messages framework
- Email sending

Day 10: Django REST Framework

- Serializers and ViewSets
- Routing with Routers
- API authentication (Token, JWT)
